

List ADT Operations

```
arr = []
```

```
n = int(input("Enter number of elements: "))
```

```
for i in range(n):
```

```
    val = input("Enter element: ")
```

```
    arr.append(val)
```

```
print("List after insertion:", arr)
```

```
d = input("Enter element to delete: ")
```

```
if d in arr:
```

```
    arr.remove(d)
```

```
    print("Element deleted")
```

```
else:
```

```
    print("Element not found")
```

```
print("List after deletion:", arr)
```

```
s = input("Enter element to search: ")
```

```
if s in arr:
```

```
    print("Element found in the list")
```

```
else:
```

```
    print("Element not found in the list")
```

Output:

Element not found

List after deletion: ['A', 'B', 'C']

Element not found in the list
